

Release Notes

Product	EvOps for Azure Stack
Version	1.1908.1674 (Azure Stack 1908)
Release Date	2019-10-11
Content	New Features Corrections Known Limitations

EvOps for Azure Stack

Take control of how your resources in Microsoft Azure Stack are provisioned and managed with possibility to integrate with leading ITSM tools, using EvOps for Azure Stack.

New Features

Features added in this version.

- List box prompt now supports multi-select
- It is now possible to export and delete Request template in the list view

Corrections

Defects corrected in this version.

- It is now possible to cancel requests with activities in progress
- HTTP activities now warn if output cannot be converted to JSON format

Known Limitations

Limitations identified in this version.

- It is currently not possible to edit list values like "Classification, Source, Support group" this will be possible in a future release
- Resource group- and location picker are added by default to the wizard of a new request template, for any request that does not include a Deployment Activity the resource group and location picker can be removed
